Women in High Performance Computing
PRACE User Forum: How to recruit and retain women in the European HPC community

Toni Collis
Why?

1. How many women are there?
2. How do we improve the proportion of women in HPC?
3. How can we retain a diverse community?
### What do we know?

**How many women are in our community?**

- Women make up no more than 20% of our community
- 13% of SC15 and SC16 attendees were female
- Other conferences show as little as 5% (PGAS) and no more than 17% (PraceDays16)

**Science fields**

- Physics & Astronomy: 17%
- Chemistry: 27%
- Biological sciences: 45%
- Earth, marine & environmental science: 36%
- Engineering & technology – 19%
- Computer sciences – 22%
- Mathematical sciences – 29%

Data from HEFCE UK [http://www.hefce.ac.uk/](http://www.hefce.ac.uk/)
How to count

• Do’s and Don’ts:
  • Do ask your colleagues: let them self-declare their gender.
  • Don’t assume
  • Do offer an ‘opt-out’.
  • Do share numbers and percentages.
  • Don’t share data that is not anonymised, or for groups <5 people.

• What to measure:
  • Gender of your HPC users/colleagues
  • How engaged users are with HPC. How many CPU hours do they use? Who is inactive/active?
  • Who are they (e.g. PIs/Co-Is/researchers, students)?
  • Publication rates
What you can do

- Address the ‘Gender Dimension’ in H2020
- Provide mentorship and sponsorship
- Look at your family-friendly working policies
- Attend WHPC events (see www.womeninhpc.org/events)
- Run your own events aimed at encouraging women
  - Mentoring networks
  - Hold social events for women to meet each other
  - Hold training that encourages female attendance
  - Invite more female keynote presenters
  - Look at how you run your conferences and events
